

SAS - 202 Mk II Striping Controller

...for TASCAM and compatible digital multitracks

Product Profile:

The SAS-202 Mk II from Synchronous Systems is a redesigned version of the classic striping interface from Turn Up Communications. The SAS interface is designed to make the DA-88 easier to use in the post-production environment.

When posting a production it is common practice to have different personnel work on different elements of the production at the same time and in various locations. A problem can arise when it is time to bring the various elements together on the mixing stage. If the individual elements do not have a constant relationship between absolute time and SMPTE code the elements will not lock without an offset.

The SAS-202 solves this problem by controlling the SMPTE generator of the DA-88's SY-88 Sync card to force a constant relationship between the codes. All tapes that have timecode recorded using an SAS-202, no matter where recorded, by whom, or when, will have the same SMPTE to absolute code relationship.

Features:

- Pre-settable generator start times*
- Front panel bypass switch for permanent installations*
- Back panel serial-through connector*
- Rack-mountable*
- Full stripe and two film modes of operation
- Powered by the DA-88
- Able to stripe multiple tapes simultaneously

Size

5 1/2 x 6 x 1 1/2
